

# EVERY HOME HAS A TICKING TIME BOMB

It's just a matter of time.

## BOOM! Ever had this happen?

Flexi water hoses are a ticking time bomb and may eventually fail - with potentially catastrophic results. Most insurance companies will now no longer come to your pool party when this happens.

Braided stainless steel has been found not to provide the required rust protection it first promised. A combination of poor installation practices and chemical attack issues corrodes the braiding over time, leading to the potential bursting of their inner liners.

Current flexi water hoses have a short shelf life and unless you have installed the latest Abey 'Polyamide' Hi Class Easy Hooker, you could get into deep water. Abey Hi Class Easy Hookers offer the highest class of rust protection and a massive 15 Year Abey Rust Resistance Warranty.

***Make the change to a genuine Abey Polyamide Hi Class Easy Hooker today.***

Abey Australia manufacture and source the best of breed plumbing products the world has to offer. While they may look the same, not all water connectors are the same and purchasing a premium Abey product is your best insurance against rust and burst water hose damage due to corrosion. For as little as just a few cents more, you can buy piece of mind knowing that your water connectors are not going to suddenly explode.

THE TRADESMAN'S CHOICE

# VIRTUALLY EVERY DWELLING IN AUSTRALIA TODAY IS SITTING ON A TICKING TIME BOMB.

Insurance company statistics show that flexible braided pipes were responsible for more than 20% of water damage claims\*. But as time moves forward these figures will certainly rise to potentially epidemic proportions as corrosion and product failures increase.

Most water connectors have the potential of failure. It's just a matter of time. Water hoses should be checked every year for corrosion and changed every 5 years or earlier.

## SOLUTION...

Abey's Polyamide Hi Class Easy Hookers offer the most advanced solution and use high strength, non-metallic, non-corrosive braiding similar to kevlar material used in bulletproof vests. Because they are not metal they will never rust, even when in extended contact with water-borne chemicals such as chlorine. They are stable and strong, don't kink and best of all they come with an unheard of 15 Year Abey Rust Resistance Warranty.

- | Superior strength and corrosion resistant
- | 15 Year Abey Rust Resistance Warranty
- | Tested and watermark approved
- | Easy to fit and flexible
- | Higher tensile strength
- | Higher working pressure
- | New SOFTPEX® Core with excellent mechanical characteristics

### No more kinking

Kinking in flexi water hoses can rupture the inner lining. This is often caused by over-tightening and twisting of the braided hose creating pressure and tension, causing stress and breakages over time. Abey Hi Class Hookers' anti-kink design enables plumbers to use two spanners to hold the braided hose sleeve securely in place while tightening the end nut - counteracting any twisting and kinking.

### The new SOFTPEX® Core

The new SOFTPEX® Core guarantees a mechanical performance superior to EPDM which can release polluting substances such as chlorine, affecting water potability. Other advantages over an EPDM rubber hose include: a longer life with extensive age/stress testing, higher abrasion resistance, higher tensile strength, non-corrosiveness, higher working pressure and 0% failure rate.

**Don't wait for disaster to strike! Change over to an Abey Polyamide Hi Class Easy Hooker - the highest protection in its class.**
